

ICEASSM'2019

Call for Sponsors

International Conference on Engineering, Applied Sciences and System Modeling

Sponsorship and Exhibitions

Sunyani, Ghana, December 11–13, 2019

Many organizations including the United Nations have predicted the population of Africa to double by 2050. The surge in population will improve Africa's Gross Domestic Product (GDP), predicted by the African Development Bank to rise over US\$15 trillion in 2060, from a base level of US\$1.7 trillion in 2010. However, it will be difficult to achieve these GDP projections if challenges arising from population boom are not adequately addressed. The challenges are complex including demands for affordable and sustainable housing, infrastructure, communication, transportation, energy, production and manufacturing of goods and services, etc. It is thus an imperative for researchers, scientists and engineers to seek for innovative solutions to overcome these challenges and to instill opportunities for investment and development of the continent.

The 2nd International Conference on Engineering, Applied Science and System Modeling will bring together researchers, engineers, and experts from different countries worldwide to Sunyani, at center of Ghana. Indeed, the event will bring together an audience of international delegates of scientists, engineers, and experts from industrial companies and health institutions. Also, the conference will allow sharing with young experts, scholars, engineers, and end users key-knowledge and the most up-to-date visions of breakthroughs in sciences and their applications, while offering opportunities to extend your networks to Africa.

Sponsors and exhibitors of ICEASSM'19 will benefit from exposure to academics and industry professionals, decision-makers, engineers, researchers and students involved in the field of sciences and engineering. The sponsors' logos will be associated to the conference and appear on conferences materials and documents along with the proceedings. Therefore the sponsors will benefit from the exposure to up-to-date research, latest technological innovations and emerging investment opportunities in Africa.

The early confirmation of partnership will guarantee a higher level of exposure during the promotional campaign through prospectus, direct mail campaigns, email broadcasts and the web.
